

- Sponsor point of view
The sponsor has expressed the following requirements:
-the app must have a function that automatically deletes note after a specific amount of time (expiration date)
-the app must have a function that allows for the attachment of pictures (a specific type of file not mentioned) into the note itself.
- Scope of the project
-the app is intended for casual use, targeting a wide scope of users, with a wide variety of needs.
- Business Objectives
-the main objective is to provide a low-budget app that is quite affordable, and relatively easy to distribute, in the early stages of the release it will be available only as a web application.
- User point of view
-the app must be user-friendly with an interface that is both simple and intuitive that does not require a tutorial or previous experience with similar apps.
- User Goals
-a light, intuitive app that is not resource (does not put a strain on the device hardware) hungry and easy to grasp within a short amount of time, clear from unnecessary elements that might distract.
- User inputs & Outputs
-with minimal effort, the user should be able to access exactly what they intend to find, uses well-established symbols and markers that are well known by the average user.
-Non-complex interface.
- Functional (What the system does)
-expiration date; the option to save pictures; the option to create and delete notes; intuitive interface; formatting; search options; drag and drop options; sort descending
- Non-Functional (How well the system does it)
-the integrated development environment that will be used for the creation of the app will be Microsoft Visual Studio; work methodology SCRUM, HTML programming language as well CSS; JavaScript, C#; Microsoft SQL, must have operation compatibility with Windows OS and all browsers; in addition MVC structure will be used.
